## PROFILE SUMMARY

Backend Developer specializing in Java and Spring Boot, with experience building scalable systems and AI-powered applications. Developed production-ready solutions including a video streaming platform and RAG-based systems using REST APIs, secure authentication, and asynchronous processing. Strong foundation in Data Structures and backend system design.

## TECHNICAL SKILLS

**Languages:** Core Java, Advance Java, OOPs, Collections Framework, Multithreading, Exception Handling, SQL

**Frameworks:** Spring Boot, Spring Security (JWT, OAuth2, OTP, OTT), Spring Data JPA, Spring AI

**Backend & Architecture:** REST APIs, API Integration, Authentication & Authorization, Asynchronous Processing, Completable Future, Virtual Thread

**Cloud & DevOps:** Docker, CI/CD, Cloud Deployment

**Databases & Caching:** MySQL, Redis Cache, MongoDB Atlas Vector Search

**Testing & Tools:** Git, GitHub, Swagger/OpenAPI, Postman, Logging (SLF4J)

**AI and Emerging Tech:** Generative AI, RAG, Embeddings, LLM Integration

## PROJECTS

**Video Stream – On-Demand Video Streaming App** Live Demo | GitHub | Sep 2025 – Nov 2025

- **Tech Stack:** Core Java, Spring Boot, Spring Security, Spring AI, FFmpeg, CloudFlare R2, Docker-Compose
- Implemented **HLS-based adaptive bitrate video streaming** for smooth playback.
- Designed and optimized REST APIs with chunk-based streaming, reducing initial load time by 60% and improving scalability under concurrent users.
- Secured platform using **JWT, OAuth2, OTP, and RBAC**, and passwordless login with One Time Token.
- Optimised video upload concurrency using Java Virtual Threads enabling lightweight, scalable parallel uploads without delay also use Completable Future for non blocking call.

**SnapBuy – E-Commerce Application** Live Demo | GitHub | Jun 2025 – Aug 2025

- **Tech Stack:** Core Java, Spring Boot, Spring Security, Spring AI, Redis Cache, Stripe, MySQL, Docker-Compose
- Built a RAG based chatbot using MongoDB Atlas Vector Search to help users to search product quickly without understanding software completely.
- Implemented **JWT + OAuth2** authentication with OTP verification also use passwordless login with One Time Token.
- Improved API performance using Redis caching & pagination & sorting.
- Integrated **Stripe Payment Gateway** for secure online payments.

**Yojna Setu (AMD Hackathon by Hack2Skill)** GitHub | Feb 2026 – March 2026

- **Tech Stack:** Core Java, Spring Boot, Spring AI, Gemini API, RAG, MongoDB Atlas Vector Search, REST APIs
- Built a voice-first, multilingual AI to help rural citizens access welfare gov schemes.
- Integrated Spring AI (RAG) with MongoDB Atlas Vector Search for PDF-based government scheme retrieval.
- Delivered a solution combining robust engineering with social impact, empowering low-literacy users to claim benefits.

## EDUCATION

**Graphic Era Deemed to be University, Dehradun, Uttarakhand** July 2024 – June 2027  
– Bachelor of Computer Applications (BCA – Industry Integrated), CGPA: **8.5**

## CERTIFICATIONS & ACHIEVEMENTS

**Solved 600+ DSA problems** on LeetCode focusing on topics like DP, Graph, Tree, Heap, etc.
